

# SKY WORKER PTK-31

Yearly cost savings and increased productivity makes The Sky Worker the most sensible roofing crane.

**UPFRONT SAVINGS: \$53,300 EVERY YEAR**  
 Add first year write off and you have payback in 2 years

## List of operational savings and increased productivity

1. Much lower insurance. (Listed as scheduled equipment) \$3,300 per year compared to \$3,300 per month for a boom truck. **That's \$36,300 every year.**
2. No large truck tires. \$600 each x 10= \$6,000 with 18 month life is **\$4,000 per year**
3. Big truck maintenance. **\$1,000 per year**
4. Major fuel cost reduction. Boom truck gets 5mpg @ 50 miles a day is 10 gal. x \$4 = \$40+ \$20 run time on job is \$60 per day x 5 is \$300 per week. Allowing 40 weeks working a year = **\$12,000 every year**
5. No CDL driver needed
6. Regular crew can operate
7. No damage to property (driveways, curbs or lawns)
8. Replaces tractor trailer to haul the man lift and the truck insurance
9. No travel restrictions like large trucks have
10. Much more accessible to residential work
11. Unlimited access to university work and historic jobs
12. Perfect for coastal or island jobs where there is a weight restriction
13. Faster set up
14. Self Drive, from remote control, drives anywhere around any job
15. Can be driven, used and stored inside buildings
16. More efficient because of the articulating boom and operation may be from the roof
17. Safer because of remote control
18. Built in, real-time load measurement means you can't overload the crane — job safety
19. Conveniently switch from crane to man-lift in minutes
20. No rent fees, no waiting on rental delivery
